

Project: The Pond and Lagoon Demonstration, Mitchell Park

Milwaukee WI

- Location: Milwaukee, WI
- Hoffman Landscape Project Value: \$20,000
- Construction Time Line: 2012
- Status: Completed

SCOPE OF WORK:

The Pond and Lagoon Demonstration Project included stabilization of the shorelines, grading, native plantings, heavy rock work and stormwater BMP construction. General Contractor on the project was RAMS Contracting Inc. from Lannon WI.

Hoffman Landscape scope was to furnish, install and maintain wetland plantings for the shoreline area. Plantings were split in 2 zones: shoreline (best for shoreline or sloped areas) and emergent (shallow areas). We've installed over 1,000 plantings and goose exclusion fence along shoreline area to keep the plantings protected.

Project is followed by a 2 Year maintenance period starting July 2012. To enhance the native plantings and increase the likelihood of their success the vegetated areas must be managed to control non-native species.

Part of our scope was also to restore areas damaged by construction activities in the park. We've successfully finish graded and hydroseeded almost 1,000 SY of turf.
